

(1)

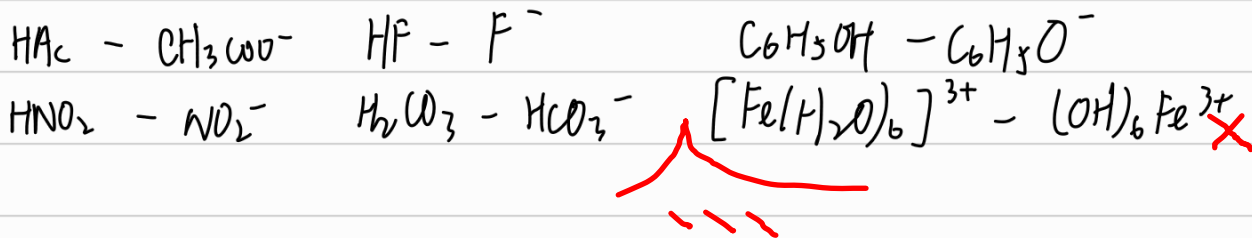

(2) $E_a(\text{逆}) = 215 + 55 = 270 \text{ kJ} \cdot \text{mol}^{-1}$

6-3

温度。溶液中的温度升高会使离解常数增加。

6-13

6-19

$0.1 \text{ mol} \cdot \text{L}^{-1}$ HCN 溶液的离解度为 α , 欲使 HCN 的离解度增大到原来的 2 倍, 应将溶液稀释到原来的几倍?

$$\alpha = \frac{[\text{CN}^-]}{[\text{HCN}]} = \sqrt{\frac{K_a}{C_a}} = 1$$

$$\sqrt{\frac{K_a}{C_{a_2}}} = 2$$

4倍

$$K_a = 4 C_{a_2}$$
